- 1. A geospatial entity object code (GEOCode) comprising a single concatenated numeric geospatial data format or an encapsulated object class, converted from global positioning system coordinates in latitude and longitude format or decimal equivalent format and additional spatial information.
- 2. The GEOCode according to claim 1, in combination with converting means for converting global position system coordinates in latitude and longitude format ordecimal equivalent format and additional spatial information into the GEO code for encoding onto a video frame at a time of media acquisition.
- 3. The combination according to claim 2, further comprising:

encoding means for encoding geospatial data onto a data segment of a video frame at a time of geospatial data acquisition.

LITMAN LAW OFFICES, LTD. P.O. BOX 15035 ARLINGTON, VA 22215 (703) 486-1000 4. The combination according to claim 3, further comprising:

capturing means having a geospatial receiver interconnected with a focus element at a first location, said capturing means being configured for capturing information of an entity at a second location, and geospatially referencing the second location to the first location in accordance with a focus ratio of the focus element and geospatial data associated with the geospatial receiver.

5. The combination according to claim 4, further comprising:

scheduling means for scheduling requests for acquisition of geospatial data, said geospatial data including visual, audio, textual, and geospatial information.

6. The combination according to claim 4, further comprising:

production means for producing integrated geospatial datasets.

7. The combination according to claim 4, further comprising:

distribution means for distributing geospatial datasets.

ARLINGTON, VA 22215
(703) 486-1000

8. Acquisition means for acquiring geospatial data, said acquisition means comprising:

encoding means for encoding geospatial data onto a data segment of a video frame at a time of geospatial data acquisition;

capturing means having a geospatial receiver interconnected with a focus element at a first location, said capturing means being configured for capturing information of an entity at a second location, and geospatially referencing the second location to the first location in accordance with a focus ratio of the focus element and geospatial data associated with the geospatial receiver; and

converting means for converting global positioning system coordinates in latitude and longitude format or decimal equivalent format and additional spatial information into a single concatenated numeric geospatial data format or an encapsulated object class for encoding onto a video frame at a time of media acquisition.

9. The acquisition means according to claim 8, further comprising:

scheduling means for scheduling requests for acquisition of geospatial data, said geospatial data including visual, audio, textual, and geospatial information.

P.O. BOX 15035
ARLINGTON, VA 22215
(703) 486-1000

10. The acquisition means according to claim 8, further comprising:

production means for producing integrated geospatial datasets.

11. The acquisition means according to claim 8, further comprising:

distribution means for distributing geospatial datasets.

12. A geospatial information processing method comprising: providing global positioning system coordinates in latitude

and longitude format or decimal equivalent format and additional

spatial information; and

converting the global positioning system coordinates into a single concatenated numeric geospatial data format or an encapsulated object class.

13. The geospatial information processing method according to claim 12, further comprising:

scheduling requests for acquisition of geospatial data, the geospatial data including visual, audio, textual, and geospatial information.

14. The geospatial information processing method according to claim 12, further comprising:

encoding geospatial data onto a data segment of a video frame at a time of geospatial data acquisition.

15. The geospatial information processing method according to claim 12, further comprising:

interconnecting a geospatial receiver with a focus element at a first location.

16. The geospatial information processing method according to claim 12, further comprising:

capturing information of an entity at a second location.

17. The geospatial information processing method according to claim 12, further comprising:

geospatially referencing the second location to the first location in accordance with a focus ratio of the focus element and geospatial data associated with the geospatial receiver.

18. The geospatial information processing method according to claim 12, further comprising:

producing integrated geospatial datasets.
